ALCOLIN®

Weekend Inspiration

Kitchen Tablet Stand

You will need:

- Alcolin Cold Glue
- 18mm plywood, cut to 300mm x 210mm
- 22 x 22mm pine cut in lengths of one 280mm (bottom) piece and two 80mm pieces (sides)
- 12mm dowel

Instructions: Start by placing your tablet on the plywood and marking where you want the bottom and sides pieces of pine to be. Attached the pieces of pine with Alcolin Cold Glue and nails, then wait for the glue to dry completely before moving to the next step. Drill two 12mm wide holes as shown in the back of the plywood board, making sure to go only halfway through the wood. Push the dowel into the necessary hole, depending on whether you want to rest your tablet in the vertical or horizontal position.
